

Lumax[®]-Slimline

The concept of illuminating tubes for lighting designers, architects and interior designers

Lumax[®] - Slimline tubes will give new life to objects, rooms and complete buildings. Imaginations, fantasy and artistic demands conglomerate to impressive, homogenous room pictures - once decent, once powerful set in the (right) light.

Thanks to Lumax[®] - Slimline most different lighting concepts can be composed and realized. For example, architecture can be changed into an effectful, decorative stage scene, where impressions, moods and individual atmospheres can be created. With its unlimited possibilities in lighting technology, this illuminating concept accentuates, stresses, inspires in an impressive way.

- Unlimited possibilities in lighting techniques
- For indoor and outdoor use
- Can be manufactured in any individual shape
- Huge choice of 51 colors
- Will fit ideally to existing rooms and shapes
- Even the most complicated shapes can be realized
- Physiologically correct light from full spectrum phosphors
- High luminous flux and pleasant luminous density give optimum light performance
- Decorative light lines with almost invisible gaps
- High efficiency, up to 100 Lumen/Watt
- Remarkably increased lamp life compared to standard tubes
- The luminous tubes can be regenerated, the glasswork can be reused
- Consultation, planning, production and installation from one single contractor.

Applications

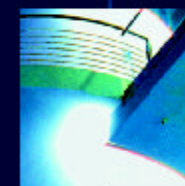

- Public areas
- Conference and ball rooms
- Reception halls
- Museums, galleries, exhibition halls
- Trade show booths / store interior
- Production halls
- Staircases
- Hand rail lighting
- Escalators
- Floors

Technique

- Gas discharge lamps, basically equivalent to high-voltage discharge tube lamps
- does not require preheat before starting
- Ignition voltage below 1000 V enables low-voltage installation (i.e. DIN 0100)
- Luminous tube diameter 8 to 50 mm
- Luminous tube length 300 to 2400 mm
- Electrode position variable to specification
- Dimmable down to 1 % luminous flux
